PRECAST CONCRETE

**NEW FUNCTIONALITY WITH THE APPLICATION OF NEW
ARA IONIC ACCELERATOR**

It is common knowledge that:

- crystals of carbonate and the salts present in water change in precipitates and become calcareous scale, which is the main cause for the reduction of flowing water in the pipes;
- consequently it increases water pressure inside the pipes with risk of damage;
- filters are clogged;
- it is necessary to intervene with chemical treatments that, restoring the functionality of the devices and the pipes, attach also them, with consequent damages to the environment.

With the installation of NEW ARA, on instant steam generator and/or accumulation and for water treatment for the production of concrete, we obtain:

- ✓ elimination of all the previous incrustations in the tubes and in the systems, preventing the reformation;
- ✓ elimination of chemical descaling agents, but also aggressive and polluting;
- ✓ longer duration of the equipments and the tubes;
- ✓ reduction of the maintenances of the systems, with consequent incalculable economies;
- ✓ smaller pollution in the disposal of the water of unloading;
- ✓ improved of the resistance to the compression and bending of the manufactured article;
- ✓ improved thermal exchange with consequent reduction in fuel consumption.
