AQUEDUCTS

**NEW FUNCTIONALITY WITH THE APPLICATION OF NEW
ARA IONIC ACCELERATOR**

It is common knowledge that:

- crystals of carbonate and the salts present in water change in precipitates and become calcareous scale, which is the main cause in the reduction of flowing water in the pipes;
- it increases water pressure inside the pipes with risk of damage;
- filters are clogged;
- it is necessary to intervene with chemical treatments that, restoring the functionality of the devices and the pipes, attach also them, with consequent damages to the environment.

With the installation of NEW ARA we obtain:

- elimination of all the previous encrustations in the tubes and the systems, preventing the re-formation;
- elimination of chemical descaling agents, but also aggressive and polluting;
- elimination of the equipment for the treatment of the water;
- greater duration of the equipments and the parts of system (for instance sluice gates);
- reduction of the maintenances of the systems, with consequent incalculable economies;
- prevention to the formation of algae bloom and microscopic fungus;
- improvement of flowing back waters with ecological and economic advantages owing to a greater efficiency of the draining systems;
- safeguard of the atmosphere.
