CAR WASHES

**NEW FUNCTIONALITY WITH THE APPLICATION
OF NEW ARA IONIC ACCELERATOR**

It is common knowledge that:

- crystals of carbonate and the salts present in water change in precipitates and become calcareous scale, which is the main cause for the reduction of flowing water in the pipes;
- consequently it increases water pressure inside the pipes with risk of damage;
- filters are clogged;
- it is necessary to intervene with chemical treatments that, restoring the functionality of the devices and the pipes, attach also them, with consequent damages to the environment.

**With the installation of NEW ARA
we obtain:**

- longer duration of the equipments, the tubes and the nozzles;
- elimination of all the previous incrustations in the tubes and the systems, preventing the re-formation;
- reduction of the maintenances of the systems, with consequent incalculable economies;
- reduction of the use of detergent products and relevant costs;
- reduction of the times of washing;
- reduction of the times of drying;
- reduction of consumption of the electric power;
- improvement in refluent waters with ecological and economic advantages for greater efficiency of the draining systems.
