CATTLE BREEDING - FARMS

**NEW FUNCTIONALITY WITH THE APPLICATION OF NEW
ARA IONIC ACCELERATOR**

It is common knowledge that:

- crystals of carbonate and the salts present in water change in precipitates and become calcareous scale, which is the main cause in the reduction of flowing water in the pipes;
- it increases water pressure inside the pipes with risk of damage;
- filters are clogged;
- it is necessary to intervene with chemical treatments that, restoring the functionality of the devices and the pipes, attach also them, with consequent damages to the environment.

With the installation of NEW ARA we obtain:

- best outcome in the washing of all systems, the premises for milking and the stables;
- top quality of the water used in the drinking troughs and for the cleanness of the udders;
- elimination of all the previous incrustation in all systems of irrigation, preventing the re-formation;
- elimination of all chemical descaling agents, but also aggressive and polluting;
- prevention in the formation of algae, fungi and bacteria;
- prevention of the diseases of the trees, the flowers, the fruits and the animals;
- reduction of the consumption of manure;
- reduction of the maintenances of the systems, with consequent incalculable economies;
- greater duration of the equipments, the tubes and the nozzles.

As final results, we will have:

- ✓ milk with lesser bacterial charge;
- ✓ healthier cattle;
- ✓ larger agricultural production;
- ✓ flowers and fruits of higher quality;
- ✓ smaller operating costs.
