CONDITIONING PLANTS

**NEW FUNCTIONALITY WITH THE APPLICATION OF NEW
ARA IONIC ACCELERATOR**

It is common knowledge that:

- crystals of carbonate and the salts present in water change in precipitates and become calcareous scale, which is the main cause for the reduction of flowing water in the pipes;
- consequently it increases water pressure inside the pipes with risk of damage;
- filters are clogged;
- it is necessary to intervene with chemical treatments that, restoring the functionality of the devices and the pipes, attach also them, with consequent damages to the environment.

With the installation of NEW ARA we obtain:

- elimination of all the previous incrustations in the tubes and the recycling systems, preventing the reformation;
- elimination of the use of chemistry and the relevant costs;
- impediment to the formation of incrustations in vaporizers;
- impediment to the formation of algae, microscopical fungi and bacteria in the humidification cells, in the filters and the pipes;
- reduction of the maintenances of the systems, with consequent incalculable economies;
- longer duration of the equipments, the tubes and the nozzles;
- top quality of the air in atmosphere.
