MINERAL WATERS AND DRINKS

**NEW FUNCTIONALITY WITH THE APPLICATION OF NEW
ARA IONIC ACCELERATOR**

It is common knowledge that:

- crystals of carbonate and the salts present in water change in precipitates and become calcareous scale, which is the main cause in the reduction of flowing water in the pipes;
- it increases water pressure inside the pipes with risk of damage;
- filters are clogged;
- it is necessary to intervene with chemical treatments that, restoring the functionality of the devices and the pipes, attach also them, with consequent damages to the environment.

With the installation of NEW ARA we obtain:

- elimination of all the previous encrustations in the tubes and the systems, preventing the re-formation;
- reduction of the maintenances of the systems, with consequent incalculable economies;
- reduction of the temperatures of washing;
- greater duration of the equipments, the tubes and the nozzles;
- better washing of bottles and tanks with smaller consumption of detergent (until 50%);
- better washing of systems (for instance, the system of bottling, refrigeration and pasteurization);
- better general washing of the working premises.

Moreover the treated water acquires:

- a better digestibility, its own and of its derivates;
- a constant quality during the time.

And moreover it is obtained:

- a better mixture between water and juices, also pre-treated, for decreased molecular cohesion;
- a better and more completes gasification (less CO₂ for the same result) in particularly hard waters.
